Regolatori di Portata Serie 50000 | Adjustable Restrictor Valves 50000 Series

Caratteristiche Tecniche | Technical Characteristics

Pressioni | Pressures

Pressione minima / Minimum pressure: **1 bar (0.1 MPa)**
 Pressione massima / Maximum pressure: **10 bar (1 MPa)**

Temperature | Temperatures

Temperatura minima / Minimum temperature: **-20 °C**
 Temperatura massima / Maximum temperature: **+80 °C**

Filettature | Threads

Filettatura (SHORT).
 (SHORT) Threads.

Fluidi compatibili | Fluids

Aria compressa / Compressed air.

Tubi di collegamento | Connection Tubes

Tubi in materiale plastico:
 PA6, PA11, PA12, Polietilene, *Poliuretano; ecc.
 *Per tubi in Poliuretano è consigliata una durezza di 98 shore.
 Plastic tubes:
 PA6, PA11, PA12, Polyethylene, *Polyurethane, ecc.
 *For Polyurethane hoses it is required a minimum hardness of 98 shore.

 ART. 50925

COME ORDINARE

I regolatori standard di questa serie prevedono:

- Trattamento superficiale di NICHELATURA
- Spintore sgancio tubo ROSSO per art. serie 50000.
- Spintore sgancio tubo NERO per art. serie 55000.

Gli articoli standard possono essere ordinati specificando solo ARTICOLO, MISURA, QUANTITA'.

HOW TO ORDER

The standard items of this series are supplied with:

- Surface treatment of NICKEL-PLATING
- RED Collet for 50000 series
- BLACK Collet for 55000 series

To order the standard items simply specify the ARTICLE CODE, SIZE and QUANTITY.

CARATTERISTICHE DI FLUSSO REGOLATORI DI PORTATA UNIDIREZIONALI E BIDIREZIONALI FLOW CHARACTERISTICS ADJUSTABLE RESTRICTOR VALVES UNI-DIRECTIONALS AND BI-DIRECTIONALS

Riportiamo in questa pagina le caratteristiche di flusso dei regolatori per una corretta scelta della misura che più si adatta ad ogni specifico impiego.

In this page you can find the flow characteristics of the regulators, which will help you to chose the most suitable size to satisfy every specific use.

Portata d'aria Q a 0° C e 1013 mbar (NI/min)
Air rate Q at 0°C and 1013 mbar (NI/min)

Portata d'aria Q a 0° C e 1013 mbar (NI/min)
Air rate Q at 0°C and 1013 mbar (NI/min)

COME ORDINARE

I regolatori standard di questa serie prevedono:

- Trattamento superficiale di NICHELATURA

Gli articoli standard possono essere ordinati specificando solo ARTICOLO, MISURA, QUANTITA'.

HOW TO ORDER

The standard items of this series are supplied with:

- Surface treatment of NICKEL-PLATING

To order the standard items simply specify the ARTICLE CODE, SIZE and QUANTITY.

Regolatori di portata da M5 / Adjustable Restrictor valves M5 Size

Nelle tabelle che seguono riportiamo le misure di raccordi orientabili Serie 1000 e Serie 50000 che possono essere montati con i regolatori da M5. Le misure dell'art. 1500 sono state estrapolate dalla tabella dell'articolo stesso. L'art. 50505 sono invece raccordi prodotti appositamente per questa serie di regolatori di flusso da M5.

Within the following tables we specify the sizes of the single banjo bodies from 1000 and 50000 series which can be assembled with regulators M5. The sizes of the art. 1500 have been taken from the standard single banjo bodies table. Art. 50505 are special single banjo bodies produced suitably for the of flow regulators M5 range.

I Regolatori di portata da M5 devono essere accoppiati con i raccordi orientabili da M6.

The Flow Regulators size M5 must be assembled with orienting fittings size M6.

Durante l'inserimento del regolatore nell'occhiello prestare attenzione a non rivoltare il labbro della guarnizione.

While you are assembling the flow regulator into the banjo body, please be careful to avoid to turn the lip of the seal.

Valvole a Scarico Rapido / Quick Exhaust Valve

Nella norma UNI ISO 5598 questo articolo viene così definito: "Valvola la cui uscita viene immediatamente aperta a scarico ogni qualvolta cala il valore di pressione dell'aria all'ingresso". L'aria proveniente dall'impianto entra da P sposta il tampone escludendo lo scarico R e va all'utilizzo A (Fig. 1). Nel momento in cui viene a mancare la pressione all'ingresso P, l'aria che si trova all'utilizzo per differenza di pressione sposta il tampone escludendo P e fuoriesce dallo scarico R (Fig. 2). Queste valvole permettono quindi una maggiore rapidità di scarico velocizzando i cicli di lavoro. All'uscita di R è sempre consigliabile mettere un silenziatore, oppure con opportuni collegamenti si può riutilizzare il flusso per ulteriori segnali o utilizzi.

According to the definition of the UNI standards ref. UNI-ISO 5598 this valve is considered: "Valve which immediately opens its outlet to exhaust, whenever the pressure of the air decreases at the inlet." The air arrives from the system and enters at "P", it moves the pad (Part. N. 3) sealing "R" and bending the pad edges, it travels to "A" (Fig. N.1). When it miss the pressure in "P", the air presents into the system due to the difference of pressure, it moves the pad sealing "P" and it clears through outlet "R" (Fig N.2). This allows a speedy and a better exhaust and also it speeds up the work cycles. At the outlet "R" it is advised to assembly a silencer or if necessary use the flow for further signals or uses.

Valvole a Corsoio / Slide Valves

Le valvole a corsoio possono essere considerate valvole di intercettazione ON-OFF con la variante che in posizione di chiuso lasciano defluire l'aria dell'utilizzo in ambiente, scaricando quindi la pressione nell'impianto a valle. Nella posizione ON l'aria proveniente dall'impianto si convoglia verso l'utilizzo attraverso il collegamento dei fori radiali sullo stelo della valvola. Spostando il manicotto in posizione OFF si esclude il collegamento tra impianto e utilizzo e l'aria che si trova in quest'ultimo, defluisce automaticamente in ambiente per differenza di pressione.

The slide valve can be considered a reversing valves ON-OFF with the variant that in the closed position it allows the used air to flow out to atmosphere. More detailed: in the opened position the air which comes from the system directs itself towards the circuit across the connection of the radial holes on the stem of the valve. Throwing the sleeve in the closed position You leave out the connection of the radial holes and the air which is still in the circuit due to the difference of pressure with the atmosphere, flows out automatically.

Valvole Unidirezionale o di Non Ritorno / Unidirectional Valves or Non Returne Valves

Questo tipo di valvole permette il libero passaggio in un solo senso (quello indicato dalla freccia) e lo impedisce nel senso contrario. Azionate direttamente dall'aria che le attraversa, vengono normalmente impiegate come dispositivi di sicurezza, consentendo di mantenere in pressione una parte del circuito pur mandando a scarico l'alimentazione.

This kind of valves allow the free passage in only one direction, the one showed with the arrow marked on the body. They do not allow the passage on the opposite way, i.e non return. They operate directly with the air that goes through, they are normally used as safety device, permitting to keep pressure in a part of the circuit, also when the feeding pressure has been taken off.

 Tubi metallici in genere.

Various types of fittings used on the pneumatic systems and metallic threaded tubes.

Fluidi compatibili / Fluids

Aria compressa / Compressed air.

ATTENZIONE!

LO SCARICO IN AMBIENTE ESCLUDE L' UTILIZZO DELLA VALVOLA CON GAS TOSSICI, CORROSIVI, INFIAMMABILI.

ATTENTION!

THE FREE EXHAUST TO ATMOSPHERE DO NOT ALLOW TO USE THE VALVE WITH TOXICS, CORROSIVES AND INFLAMMABLES GAS.

Valvola di Blocco / Block Valve

Le valvole di blocco Aignep sono dispositivi a pilotaggio pneumatico per il controllo del movimento di un cilindro. Montate direttamente sugli attacchi di ingresso ed uscita del cilindro consentono di bloccare la corsa del pistone in caso di caduta di pressione del pilotaggio.

Sono utilizzate come sistema di sicurezza: in caso di arresto di emergenza, rottura di un tubo o mancanza d'aria bloccano i dispositivi movimentati dai cilindri evitando danneggiamenti delle parti o rischi di lesioni per gli operatori. E' possibile utilizzarle anche per arrestare lo stelo in posizioni intermedie quando le applicazioni richiedono questa soluzione.

Versioni: sono disponibili nella versione unidirezionale e bidirezionale.

Portata: le valvole sono a passaggio totale poiché non vi sono riduzioni di sezione ed il flusso non attraversa la molla.

Compattezza e versatilità: gli ingombri sono molto ridotti ed è possibile orientare sia la connessione filettata che il supporto dell'attacco del tubo per il pilotaggio.

Attacco filettato: è possibile connettere un regolatore di flusso all'ingresso della valvola per la regolazione della velocità del cilindro.

The AIGNEP's block valves are pneumatic driving devices used to control the movement of the cylinder. Assembled directly on the inlet and outlet ports of the cylinder allow to lock the piston stroke in case of pressure drop of the driving. They are used as safety devices in case of emergency stop, brake of a tube or air missing, they lock the apparatus moved by the cylinder avoiding damages to the devices or injury risks for the runners. It is also possible to use them to stop the piston into intermediate positions whenever the application requires such solutions.

Versions: They are available in uni-direction and bi-directional versions

Flow rate: These valves are full bore, there do not have reduction of section and the flow does not pass through the spring.

Compactness and Versatility: The overall dimensions are extremely reduced and it is possible to orient both the threaded connection as well as the hose connection for the driving.

Threaded connection: It is possible to connect the flow regulator at the inlet of the valve in order to adjust the speed of the cylinder.

Valvola di Blocco Unidirezionale 8880 | Unidirectional Block Valve 8880

Circuito Pneumatico
Pneumatic Circuit

Cilindro in Movimento
Cylinder in action

Alimentando la valvola di blocco A ed il pilota B si consente il moto del pistone in una direzione; alimentando la valvola di blocco B ed il pilota A si consente il moto del pistone nella direzione opposta.

Feeding the block valve A and the pilot B you allow the movement of the piston in one direction; feeding the block valve B and the pilot A you allow the movement of the piston in the opposite direction.

Cilindro Bloccato
Stopped Cylinder

Togliendo l'alimentazione all'intero circuito (per es. in caso di emergenza) le valvole di blocco arrestano il cilindro nella posizione in cui si trova, anche in caso che allo stelo siano applicati dei carichi.

Taking away the feeding within the circuit (for example in case of emergency) the block valves lock the cylinder into the position where it is at that moment, even if at the piston are attached some loads.

Installazione | Installation

Valvola di Blocco Bidirezionale 8890 / Bidirectional Block Valve 8890

Circuito Pneumatico Pneumatic Circuit

Il circuito di pilotaggio ed il circuito di alimentazione del cilindro sono indipendenti. Alimentando il circuito di pilotaggio le valvole di blocco permettono il movimento alternato del cilindro.

The driving circuit and the feeding circuit of the cylinder are independent. Feeding the driving circuit the block valves allow the alternate movement of the cylinder.

Togliendo l'alimentazione al circuito di pilotaggio le valvole di blocco arrestano il cilindro nella posizione in cui si trova, anche in caso che allo stelo siano applicati dei carichi.

Taking away the feeding to the driving circuit the block valves lock the cylinder into the position where it is at that moment, even if at the piston are attached some loads.

Installazione / Installation

Pressione di Pilotaggio / Pilot Pressure

Pressione minima del Pilota per azionare la valvola, in relazione alla pressione a monte.

Pilot minimum pressure to feed the valve compared to the inlet pressure.
